Subject index

Adsorption 343
Amines 271
Anharmonic oscillators 321
Anisotropic constraints 131
Argon, second virial coefficient 117
Ar–Ar interaction 117

Basis set superposition error 165
Bimolecular interactions 165
Block copolymers 343

Carbon monoxide quintet states 153
Chirality fittingness 473
CIPSI algorithm 229
Classical dynamics 321
Complex-scaled Hamiltonian matrix 47
Compounds $[MoO_{4-n}S_n]^{2-}$ 213
Compressibility 357
Constraint release 383
Counterpoise corrections 165
Creation and annihilation operators 239
Cu^{+}-H_2O-Cl^{-}-H_2O 165
Cycle index 473
C_6 57

Diffusion wave spectroscopy 419
Diffusion-reaction 351
Dimerization of argon 117
Dipole properties 131
Diradicaloid 299
Diradicals 299
Direct selected CI 229
Discrete variable representation (DVR) 47
Dispersion energy 57
Distribution function 75
DOSD 131
Dynamics 249

Electron correlation 93, 309
Electronic structure 153
Elementary superposition 473
Entanglement of polymers 407
Entanglement phenomenon 383
Exotic compounds 425

First-principles UHF 285
Fourth-row atoms 207
Fractal foams 351

Gaussian basis sets 93
Gaussian basis sets, high-quality 207
Geometrical response equations 7
Glycine adsorption 435
Green's function 309

Hemin 285
1,3-Hydrogen migration 299
^{95}Mo-NMR chemical shift 213
Hydrogen molecule 425
Hydroperoxynitrene (NOOH) 299
Hyperfine coupling constants 93
Hyperfine properties 285
H_2 57
H_2-(rare gas) 57
H_2–Be 57
H_2–H 57
H_2–Li 57

Imine peroxide (HNOO) 299
Inhomogeneous broadening 29
Ionic solutions 343
Ionization potential 309

KI 435

Large intermediate spaces 229
Lattice theory 357
Li 57
LiF 435
Local modes 321
Long-range interactions 153
Low density microcellular materials 351

Magnetic interactions 397
MCSCF 7
Molecules 397
Moller-Plesset perturbation theory 459
Monomer structure 357

Monte Carlo simultations 165
Multireference configuration interaction 153

NaCl 435
Negative ions 223
Nonlinear spectroscopy 29

Open shell systems 223
Orbital relaxation 309

Pair distribution function 75
Partial cycle index 473
Phase diagrams 357
Phase factors 397
Phosphines 271
Photodissociation 249
Pi radicals 93
Poincaré surfaces of section 321
Polarization 309
Polyelectrolytes 343
Polymer blends 357
Polymer entanglement 407
Polymeric systems 75
Positronium hydride 425
Positrons 425
Pyramidal inversion 271

Quasi-Newton algorithm 189

Radiation 249
Reduced density operators 239
Reptation 383
Ring polymer 407

Short-time diffusion 419
Solute-solvent interactions 29
Spherical particles 419
Spin contamination 93
Spin density 93
Spin polarization model 93
Spin-adaptation 239
Static polarizabilities 223
Stress tensor 75

Time lag 351
Topological potential 407
Transition-energy distribution 29
Transition-state location 189
Transport 351
Triatomic van der Waals molecules 47
Triisopropylamine 271
Triple-zeta valence distribution 207
Two-configurational SCF wavefunction 459

Unit subduced cycle index 473

Viscosity 383
